

Assessment-1

Prepare a web crawler for [Python Packaging Docs](#) and provide all the scraped data in a csv file.

- Scrape the installation guide with their steps as separate files.

- When scraping each steps,
 - Scrape the Headings as “Headings” field
 - Scrape the sub-headings as “Sub-Headings” field
 - Scrape the code(Unix/macOS only which is a part of those heading blocks) as “Code” field

Output CSVs should include all the above mentioned data as string format. There should be no indexing in the csv and proper line termination should be followed.

Note: Add your solution to github repo and make sure it is accessible & please share github link
